

## Pre-Loaded PIT Tag Implant System

Introducing Biomark's innovative new pre—loaded needles and planter

This system has been developed from our in-field experience of over 20 years and millions of tagged fish.

We have designed a system to benefit all connected in the tagging procedure, from the tagger to the animal being tagged.

This new method is more effective, faster and safer for all involved in the tagging process

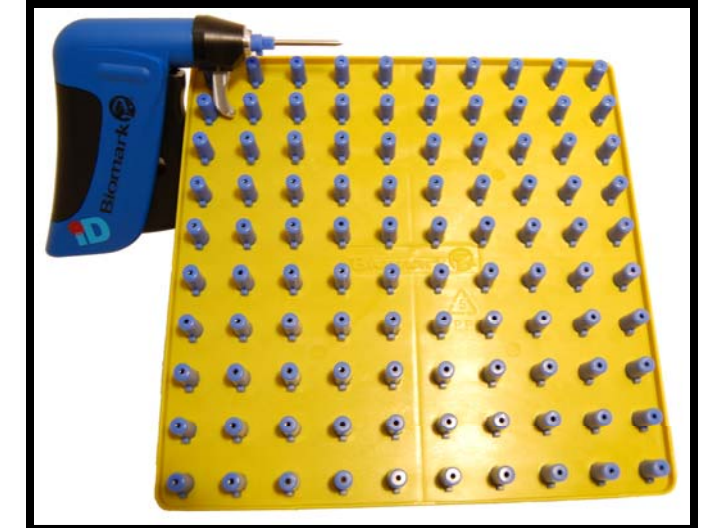

- 100% recyclable
- Eliminates the need to disinfect needles between uses
- Eliminates disease transmission between fish
- Increases safety for the taggers – no more needle pokes and risk of disease transmission
- Ergonomic injector handle reducing stress on the tagger, allowing for a safer implant process
- Proprietary technology holds the tag securely in the needle during both transportation and implantation process
- Extra sharp needle every time an implant is performed
- Single use, smaller diameter needles lead to reduced injury to fish allowing for quicker healing time, reduced fish mortality and shedding of tags
- No more vials of loose tags to deal with
- Eliminates the significant cost of reloading needles on larger tagging projects
- No more lost tags due to tags falling out of needles
- Faster implant process provides reduced time and labor expenses

Available November 2009

This product is fully recyclable

If you have any problems recycling this product locally, please return your used needles to the address below and we will make sure they are recycled at no extra charge to you.
